                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The humanised 1D10 antibody heavy chain (AAW05829) includes a variable region (see also AAW05823) consisting of human R3.5HG heavy chain variable region framework and complementarity determining regions from the murine 1D10 antibody specific for a 28/32 kDa antigen found on the surface of malignant B-cells. It can be coexpressed with humanised 1D10 light chain (see also AAW05828) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M211 heavy and light chain variable regions (see also AAW05826, AAW05830), and a second binding fragment comprising humanised M211 heavy and light chain variable regions. Such antibodies are reactive with both T or NK cells and malignant B cells, and have therapeutic and diagnostic applns. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                      soluble domains, in which an N-terminus of a soluble domain of a biologically active protein is linked to a C-terminus of an identical soluble domain or a different soluble domain of a biologically active protein. The methods and compositions of the present invention are use for the diagnosis and treatment of disorders associated with dimeric protein or its glycosylated form, such as inflammation, especiated to the protein or the glycosylated form, such as inflammation of the protein or its glycosylated form, such as inflammation of the protein or its glycosylated form, such as inflammation of the protein or the glycosylated form such as inflammation.
                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New concatameric protein having two soluble domains, useful for diagnosing and treating disorders associated with the dimeric its glycosylated form, such as inflammation, septicemia, rheur

                                                                                                                                                                                                                                                               The invention relates to a novel concatameric protein comprising two soluble domains, in which an N-terminus of a soluble domain of a biologically active protein is linked to a C-terminus of an identical soluble domain or a different soluble domain of a biologically active protein. The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with dimeric protein or its glycosylated form, such as inflammation, septicaemia, cytotoxicity, rheumatoid arthritis, cachexia and other inflammation related diseases. This sequence represents the human concatameric protein
                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New concatameric protein having two soluble domains, useful for diagnosing and treating disorders associated with the dimeric protein its glycosylated form, such as inflammation, septicemia, rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates a humanised antibody that specifically binds an epitope contained within positions 13-28 of amyloid beta peptide, Abeta. The antibody is useful to inhibit and reduce the formation of amyloid plaques or the effects of toxic soluble Abeta species in humans their fragments are used for the manufacture of a medicant. This includes the prolonged expression of recombinant sequences of them in human tissues for the treatment of clinical/pre-clinical Alzheimer's disease, Down's syndrome or pre clinical cerebral amyloid angiopathy. Specifically, the antibody is used to sequester Abeta into plasma, brain or cerebrospinal fluid to prevent/reverse accumulation of the Abeta peptide within the brain thereby improving cognition. The present sequence is the heavy chain of a humanised monoclonal antibody, Hu266, based on the mouse antibody 266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (UNIW )

                  A polypeptide (AAW11639) comprises a leader sequence, RF-1 heavy chain variable region (see also AAW11639), and human gamma 1 constant region. RF1 is a human monoclonal antibody (hMAb) specific for the fusion protein of respiratory syncytial virus (RSV). The polypeptide can be produced in eukaryotic host (e.g. CHO) cells transfected with vector NEOSPLA
                                                                                                                                                                                           Human monoclonal antibody specific for respiratory syncytial virus protein - used for the prevention and treatment of RSV infection.
                                                                                                                                                                                                                                                                                                                              Brams
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              administering a myelin-associated glycoprotein (MAG) antagonist or anti-MAG antibody, including altered antibodies or their functional fragment. The MAG antagonist or anti-MAG antibodies or their functional fragments are useful in preparing a medicament for treating or preventing stroke and other neurological diseases, or for inhibiting neurodegeneration and/or promoting functional recovery in a human patient suffering or at risk of developing stroke or other neurological disease, such as stroke, traumatic brain injury and spinal cord injury, chronic disease including Alzheimer's disease, fronto-temporal dementias (tauopathies), peripheral neuropathy, Parkinson's disease, Huntington's disease and multiple sclerosis. The present amino acid sequence represents the mouse/human chimeric anti-MAG antibody heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    stroke and other neurological diseases in a human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig

Example 1; Fig 8; 470pp; English.

for

The invention relates to a crystal comprising a CD145 polypeptide in CC complex with an anti-CD45 antibody or its antigen-binding fragment, and CC the structure coordinates of such a crystal. In particular, the crystal CC comprises human CD145 (AAM49202) and a humanised version of the murine CC CD401, gp39, T-BAM, 5c8 antigen, CD40CR and TRAP) is a 32 kD type II CC membrane glycoprotein which is transiently expressed on activated T CC cells. It interacts with CD40 which is expressed on activated T CC cells. This CD40:CD145 interaction is required for T cell-dependent CC macrophages, dendritic cells, fibroblasts and activated endothelial CC cells. This CD40:CD145 interaction is required for T cell-dependent CC production by macrophages. No mediates many of the pro-inflammatory CC production by macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the pro-inflammatory Conditions. The crystal structure of the invention can be used to determine the three dimensional structure of the invention can be used to determine the three dimensional structure of the CD45 antibody complex, and thereby provide information CC constants and antagonists which modulate three dimensional structure of the compounds may be used in the treatment of an unwanted immune cc allergy, an inhibitor response to a therapeutic agent, rejection of a constant of the c psoriasis, atopic dermaticis, systemic scriver, training myeloma and fibrosis, Crohn's disease, ulcerative colitis, multiple myeloma and cachexia. Sequences AAM49203 and AAM49204 represent, respectively, the heavy and light chains of the humanised version of the murine monocine.

The antibodies have wide therapeutic applications, including autoimmune and inflammatory diseared transplantation. The antibody can be used in a pharmaceutical composition for treating a patient suffering from a T cell mediated disorder. They can also be used to treat autoimmune diseases, inflammatory diseases, and transplantation. (Updated on 17-OCT-2003 standardise OS field)

This sequence is expressed in several libraries, generally those associated with cancer, cell proliferation, immune response or trauma. It shows homology to vertebrate immunogloblin gamma heavy-chain. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with the immune system and cell proliferation

The binding domain-immunoglobulin fusion protein is capable of at least one immunoglogical activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPFO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hinge region polypeptide comprises: a wild-type human IgGi immunoglobulin hinge region polypeptide; a mutated human IgGI immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgGI immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human IgGI immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human IgGI immunoglobulin hinge region polypeptide contains no more than one
                                                                                                                                                                                                                                                                        Sequence 492 AA;
                                                                                                                                                                                                                                                                                                                                                       seqdata.uspto.gov/sequence.html?DocID=20030118592. The authors have not identified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2003-801317/75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-JAN-2001; 2001US-0367358P

                                                                                                                                                                                                          English.
                                                                                                                                                                                                                                                Thompson
                                                                                                                                                                                                                                                PA
```

CC comprising a binding domain polypeptide, an immunoglobulin heavy chain CC immunoglobulin hinge region polypeptide, and an immunoglobulin heavy chain CC CH2 constant region polypeptide that is fused to the hinge region come polypeptide, and an immunoglobulin heavy chain CC polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide, derived from (a) having 3 or more cysteine residues; where the first cysteine residues; contains 2 cysteine residues, where the first cysteine residues contains 2 cysteine residues, where the first cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more than one (cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one (cysteine residues. The binding domain immunoglobulin hinge region polypeptide contains (construct cysteine residues) and a mutated human IgG1 immunoglobulin fusion protein is constructed of human IgG1 immunoglobulin fusion protein is constructed of mutated polypeptide contains (constructed cysteoxicity (ADCC) and complement fixation. The binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polymelectide with a recombinant expression construct comprising the binding domain-immunoglobulin fusion protein, a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a subject having or suspected of having a malignant condition or a B-cell disorder. e.g. melanoma, carcinoma or sarcoma, reumatoid arthritis, multiple selection of the sequence in the printed specification by their SQQ ID condition or a broad to demain salve and is al The invention relates to a binding domain-immunoglobulin fusion protein 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
          The invention relates to an anti-Abeta (amyloid-beta peptide) antibody 266. The antibodies are useful for treating and preventing conditions associated with the Abeta peptide, such as Alzhaimer's disease, Down syndrome, and cerebral amyloid angiopathy; for diagnosing diseases in humans; for determining whether a human subject will respond to treatment using humanized antibodies against Abeta; for treating, preventing and reversing cognitive decline in clinical or pre-clinical Alzhaimer's disease, Down's syndrome or cerebral amyloid angiopathy; for inhibiting formation of amyloid plaques of the effects of toxic soluble Abeta species in humans. Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease
 progression
                                                                                                                                                                                    Disclosure; Fig 6; 82pp; English.
                                                                                                                                                                                                                           New antibodies comprising a heavy chain and a light chain complementarity determining regions from antibody 266, for treating and preventing conditions associated with the A beta peptide, e.g. Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                  Jia

The antibodies are useful for treating and preventing conditions associated with the Abeta peptide, such as Alzheimer's disease, Down syndrome, and cerebral amyloid angiopathy; for diagnosing diseases in humans; for determining whether a human subject will respond to treatment using humanized antibodies against Abeta; for treating, preventing and reversing cognitive decline in clinical or pre-clinical Alzheimer's disease, Down's syndrome or cerebral amyloid angiopathy; for inhibiting formation of amyloid plaques of the effects of toxic soluble Abeta species in humans. Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease progression and reverses it. The present sequence represents a humanised anti-Abeta antibody 266 N56S heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 461 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel recombinant anti-EpCAM (human epithelial cell adhesion molecule) antibodies comprising an amino acid sequence defining an immunoglobulin light or heavy chain framework region. Sequences of the present invention are useful for the diagnosis prognosis and treatment of cancer. They are also used in gene therapy. The present sequence is KS antibody heavy chain-interleukin 2 (IL-2) fusion protein. This sequence is used to illustrate the method of the

                                                                                 Query Match
                                                                                                                                  This is the amino acid sequence of a single chain antibody (Sab), termed $T94Sab1, comprising an scFv derived from murine monoclonal antibody $T4 (see AAW8602) and the human gl constant region. CDNA (see AAV8021) encoding the Sab has been inserted into vector pCIneo to allow expression in mammalian cells. The trophoblast cell surface antigen defined by $T4 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or pOI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage
                                                                                                            Sequence 595
                                                                                                                                                                                                                                                                                                                                                Example 1; Fig 1B; 82pp; English.
                                                                                                                                                                                                                                                                                                                                                                        New vector encoding a tumour interacting protein for treating cancer contains a desired nucleotide sequence and/or protein which recognise tumours, and is used as a gene delivery system to treat cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                               The invention provides human antibodies that bind to stem cell factor (SCF) protein. SCF is also known as mast cell growth factor, steel factor or c-kit ligand. Antibodies of the invention are useful for preparing compositions for treating asthma. They are also used in gene therapy. The present sequence is human SCF antibody heavy chain variable and constant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; antibody; stem cell factor; mast cell
steel factor; c-kit ligand; gene therapy.
                                                                                                                                                                                                                                                                                                  New purified human antibody that binds to stem cell factor protein, useful for preparing a composition for treating asthma.

The antibodies are useful for treating and preventing conditions associated with the Abeta peptide, such as Alzheimer's disease, Down syndrome, and cerebral amyloid angiopathy; for diagnosing diseases in humans; for determining whether a human subject will respond to treatment using humanized antibodies against Abeta; for treating, preventing and reversing cognitive decline in clinical or pre-clinical Alzheimer's disease, Down's syndrome or cerebral amyloid angiopathy; for inhibiting formation of amyloid plaques of the effects of toxic soluble Abeta species in humans. Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease progression and reverses it. The present sequence represents a humanised anti-Abeta antibody 266 N56T heavy chain

Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease progression and reverses it. The present sequence represents a humanised anti-Abeta antibody 266 N56T heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Jia

                                                                                                                                                                                                                                                                                                                                           The present invention provides the coding and protein sequences for a number of human immune system associated proteins (HISAPs). These can used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
The present invention relates to domain deleted CC49 or C2BB antibodies. Domain deleted CC49 antibodies comprise a heavy chain human CC49 domain deleted sequence in which CH2 domain has been deleted and are reactive with tumour associated antigen (TAG)-72. The C2BB antibodies are reactive with CD20 and comprise a heavy chain having a sequence of a derived domain deleted C2BB construct where the CH2 domain has been deleted. Sequences of the invention are useful for imaging a neoplasm. They are also useful for treating myelosuppressed patients suffering from Hodgkin's lymphoma. Antibodies of the invention are also used to treat neoplastic disorder such as haematologic neoplasm, preferably non-Hodgkin's lymphoma. Antibodies of the invention are also used to treat neoplastic disorder, colon cancer and haematologic malignancy. They are useful for reducing tumour size, inhibiting tumour growth and/or prolonging the survival time of tumour-bearing animals and for treating
                                                                                                                                                                                                                                                      Novel domain deleted CC49 antibody reactive with tumor associated -72, or C2B8 antibody reactive with CD20, useful for treating myelosuppressed patient suffering from a neoplastic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; CC49 antibody; C2B8 antibody; tumour associated antigen; neoplasm; neoplastic disorder; haematologic neoplasm; colon canon-Hodgkin's lymphoma; haematologic malignancy; tumour.
                                                                                                                                                                                                                                                                                                                      N-PSDB; AAD45757.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a dimeric antibody (I) comprising several CC monomeric subunits, where the monomeric subunits are non-covalently cassociated. (I) is useful for treating a disorder especially immune CC associated. (I) is useful for treating a disorder, especially immune CC disorder, and neoplastic disorder such as relapsed Hodgkin's disease, CC resistant Hodgkin's disease high grade, low grade and intermediate grade CC non-Hodgkin's lymphomas, B cell chronic lymphocytic leukemia (B-CLL), follicular CC lymphoplasmacytoid lymphoma (LPL), mantle cell lymphoma (MCL), follicular CC lymphoma (FL), diffuse large cell lymphoma (DLCL), Burkitt's lymphoma, CC lymphodenopathy, small lymphocytic B cell lymphoma, angioimmunoblastic CC lymphodenopathy, small lymphocytic, follicular, diffuse large cell. (CC lymphodenopathy, small lymphocytic, follicular, diffuse large cell.)

CC diffuse small cleaved cell, large cell immunoblastic lymphoblastoma, CC small, non-cleaved, Burkitt's and non-Burkitt's, follicular, mixed small CC cleaved and large cell lymphomas, in a mammal (see ABZ24017 for a CC detailed description of the various uses of (I)). The present sequence CC represents the antibody C5E10 heavy chain

The compound composition for the treatment of cancer, solid tumours, and as an adjuvant to surgical intervention to treat minimal residual disease. The present sequence is humanised murine antibody BIWA4 heavy chain protein
                                                                                                                                                                                                                                                                                                                                                                                Sequence 444 AA;

                                                                                                                                                                                                                     The present invention relates to novel antibody molecules comprising a variable region of the heavy (VH) and/or light chain (VL) of CD44v6 specific humanised antibody called BIWAB and BIWAA. Sequences of the invention are useful for manufacturing a medicament and for treating cancer including colorectum, non-small cell lung, breast, head and neck, ovarian, lung, bladder, pancreatic cancer or metastatic cancers of the brain. They are also useful in antibody therapy. The present sequence is BIWA4/8 antibody heavy chain mature protein. This sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                         New antibodies specific for an epitope coded by the variant exon of the CD44 gene, useful for treating cancer, including non-small cell lung, breast, head and neck, ovarian and lung cancer.
                                                                                                                                                                                            Sequence 444 AA;
